Summary

Technically driven Java Developer with **6 months** of hands-on experience building and maintaining backend features for real-world applications. Proficient in Java, Spring Boot, and RESTful API development with strong understanding of OOP principles and clean coding practices. Seeking opportunities to contribute to dynamic engineering teams and grow as a backend developer.

Technical Skills

Core Technologies: Java, Spring Boot, Spring Framework, Spring JPA, RESTful APIs

Programming Concepts: Object-Oriented Programming (OOP), Data Structures, Exception Handling

Databases: SQL, MongoDB

Frontend Technologies: React, JavaScript (ES6+), HTML5, CSS3

Backend Technologies: Node.js, Express.js

Development Tools: Git, Postman, Maven

Methodologies: Agile Development, Clean Code Practices

Experience

Java Developer, BytesBizz Technology LLP, Rajkot

Jan 2024 – Apr 2024

- Developed and maintained RESTful APIs using Spring Boot, applying core Java OOP principles to build functional backend services for real-world projects.
- Gained hands-on experience with Spring JPA for data persistence, working on database integration tasks to store and manage application data efficiently.
- Implemented robust error handling techniques and exception management, contributing to application stability by ensuring clear error responses in APIs.
- Collaborated with cross-functional teams during agile sprints to deliver backend features aligned with project requirements and timelines.

Full Stack Developer, Exposys Data Labs, Bengaluru

Jul 2023 – Nov 2023

- Developed user interfaces using React with functional components, JSX syntax, and state management using useState and useEffect hooks.
- Built and integrated RESTful APIs using Node.js and Express.js framework, creating server endpoints and handling HTTP request-response cycles.
- Actively participated in team planning sessions and agile meetings, collaborating on project timelines and feature development priorities.
- Gained experience in full-stack development workflow, understanding data flow between client and server in web applications.

Projects

User Management System

A RESTful API built with Spring Boot and React enabling complete user management through CRUD operations.

- Developed backend REST API using Spring Boot with full CRUD functionality for user management operations.
- Implemented Spring JPA for database persistence and query operations, ensuring efficient data handling.
- Created React frontend interface integrated with backend API for seamless user interaction.
- Applied exception handling and input validation to ensure data integrity and application reliability.

Tech Stack: Java, Spring Boot, Spring JPA, React, SQL

Movie Catalogue

A React-based web application allowing users to explore movies, check ratings, and manage a favorites list.

- Built responsive single-page application using React with component-based architecture and state management.
- Implemented features for browsing movies, viewing ratings, and adding/removing favorites with persistent data.

handling.

- Utilized React hooks (useState, useEffect) for efficient state management and side effects handling.

Tech Stack: React, JavaScript, HTML5, CSS3

Education

Bachelor of Engineering in Computer Engineering, Government Engineering College Rajkot Sep 2021 – Feb 2025

- CGPA: 6.7 / 10

Diploma in Computer Engineering, Tolani Foundation Gandhidham Polytechnic Jun 2019 – Jul 2021

- CGPA: 6.9 / 10
