Summary

Technically driven Java Developer with **8 months** of hands-on experience building and maintaining backend features for real-world applications. Proficient in Java, Spring Boot, and RESTful API development with strong understanding of OOP principles and clean coding practices. Seeking opportunities to contribute to dynamic engineering teams and grow as a backend developer.

Technical Skills

Core Technologies: Java, Spring Boot, Spring Framework, Spring JPA, Spring Security, RESTful APIs

Programming Concepts: Object-Oriented Programming (OOP), Data Structures, Exception Handling

Databases: SQL, MongoDB

Frontend Technologies: React, JavaScript (ES6+), HTML5, CSS3

Backend Technologies: Node.js, Express.js

Development Tools: Git, Postman, Maven

Methodologies: Agile Development, Clean Code Practices

Experience

Full Stack Developer, Exposys Data Labs, Bengaluru

March 2025 – June 2025

- Assisted in developing basic RESTful APIs using Spring Boot while learning how backend services are structured using core Java OOP concepts.
- Practiced database integration using Spring Data JPA to perform basic CRUD operations and understand how application data is stored and retrieved.
- Learned and implemented basic exception handling in APIs to return meaningful error responses and improve application reliability.
- Worked on small backend tasks and bug fixes while learning the development workflow in an agile environment.

Full Stack Developer, BytesBizz Technology LLP, Rajkot

Jan 2024 – Apr 2024

- Practiced building simple user interfaces using React with functional components and JSX, while learning basic state management using hooks like useState and useEffect.
- Created basic REST API endpoints using Node.js and Express.js to understand how HTTP requests and responses work in backend development.
- Worked on small frontend and backend tasks during project development while learning how features are implemented step by step.
- Gained practical understanding of how data flows between the client (React) and server (Node.js APIs) in a web application.

Projects

User Management System

A RESTful API built with Spring Boot and React enabling complete user management through CRUD operations.

- Developed backend REST API using Spring Boot with full CRUD functionality for user management operations.
- Implemented Spring JPA for database persistence and query operations, ensuring efficient data handling.
- Created React frontend interface integrated with backend API for seamless user interaction.
- Applied exception handling and input validation to ensure data integrity and application reliability.

Tech Stack: Java, Spring Boot, Spring JPA, React, SQL

Movie Catalogue

A React-based web application allowing users to explore movies, check ratings, and manage a favorites list.

- Built responsive single-page application using React with component-based architecture and state management.
- Implemented features for browsing movies, viewing ratings, and adding/removing favorites with persistent data handling.
- Utilized React hooks (useState, useEffect) for efficient state management and side effects handling.

Tech Stack: React, JavaScript, HTML5, CSS3

Education

Bachelor of Engineering in Computer Engineering , Government Engineering College Rajkot	Sep 2021 – Feb 2025
CGPA: 6.8 / 10	
Diploma in Computer Engineering , Tolani Foundation Gandhidham Polytechnic	Jun 2019 – Jul 2021
CGPA: 7.0 / 10
